Let's say you're getting married in Las Vegas and want to capture the whole experience with selfies. You already know you can photograph yourself with your bachelorette brigade, opening the door of a stretch limo, inside that cute little chapel and with your hand on a Bible. But what if you want a selfie with your hand on a stack of poker chips? Or rolling the dice at the craps table? Now you can.

Las Vegas casinos used to ban photography at gaming tables and machines, but now some resorts welcome it.

[The Strat](#), for example, wants you to snap and share selfies everywhere, including while you're gambling. Its blackjack, craps and roulette tables are covered with a fabric that promotes the Strat's social media handle (@Stratvegas) and hashtag (#STRATselfie). "We want our guests to have fun playing table games," said Brian Stanton, the resort's vice president of table games. "If part of that fun is taking a photo to capture that moment, we welcome it."

Downtown's [Four Queens Resort and Casino](#) also encourages guests to take photos (but not videos) throughout the property and share them with friends. A prominent brass sign affixed to a brick wall at the casino reads: "Please feel free to take photos in the Four Queens. We want you to remember your visit."

[Rampart Casino](#) in Summerlin embraces taking selfies too, "as long as it's not interrupting the guest experience," spokeswoman Alissa Kelly said.
